Benefits and Fees

Established in 1988, Silicon Integration Initiative, Inc. (Si2) is an international not-for-profit consortium whose mission is to achieve industry adoption of collaborative technology and services that deliver higher levels of silicon design integration, enabling compelling advantages for our members through reduced costs, faster time to market, and improved IC design capability.

Si2 maintains its focus on critical issues through a dedicated and neutral organizational structure that facilitates the collaboration of its industry-wide membership. Elected annually from its membership, the Si2 Board of Directors oversees and administers business and technical goals. Si2's approach to tool-integration issues works because its members are driven by real industry needs.

Members benefit from engagement in Si2 activity at several levels. Whether you are interested in project participation at a working group or advisory board level, or simply want to stay abreast of the latest technology developments through publications and other industry participation, you determine the level of participation you desire.

Today Si2 represents semiconductor manufacturers, electronic systems companies and commercial EDA vendors throughout North America, Europe and Asia. This provides you with access to some of the most powerful minds in the industry today. We advance your cause by helping the industry find ways to collaborate in solving problems that are bigger than any one participant in the business can solve alone.
